Education

Bennett University (The Times Group) **2023 – 2027**

B.Tech in Computer Science Engineering | AI Specialization *Noida, Uttar Pradesh*

- **Relevant Coursework:** Data Structures & Algorithms, Artificial Intelligence & Machine Learning, Probability & Statistics

Technical Skills

Languages: Python, C++, JavaScript, SQL
AI/ML: PyTorch, TensorFlow, Scikit-learn, OpenCV, Pandas, NumPy
Generative AI: LLMs, RAG, AI Agents, LangChain, LangGraph, Hugging Face, FAISS
Backend & APIs: FastAPI, Flask, Node.js, REST APIs
Frontend: Next.js, React, HTML, CSS, Tailwind CSS
Databases & Tools: MySQL, PostgreSQL, MongoDB, Git, GitHub, Postman, VS Code
Core CS: Data Structures & Algorithms, System Design

Experience

Unified Mentor **July 2024**

Data Science Intern – Training & Project Program *Online*

- Engineered end-to-end data pipelines using Python, Pandas, and NumPy to clean, transform, and analyze large-scale datasets, delivering actionable insights through statistical analysis and visualization.
- Analyzed 850+ FIFA World Cup matches across 20 tournaments by consolidating three linked datasets to uncover performance trends in team and player statistics, visualized using Matplotlib and Seaborn.
- Conducted EDA on a sales dataset spanning 7 regions and 12 product categories, identifying revenue bottlenecks and regional demand patterns to support data-driven pricing decisions.

Projects

OmniMed: Agentic Clinical Decision Support System | *FastAPI, PostgreSQL, Next.js, TypeScript, Tailwind CSS, Ollama*

- Built a full-stack copilot that guides clinicians through patient decisions, generating evidence-grounded clinical briefs, care plans, and treatment recommendations, with a document-ingestion pipeline (PDF, CSV, OCR) where a local LLM extracts structured medical fields and merges multiple reports at patient level.
- Integrated a local LLM via Ollama for evidence-grounded clinical insights, risk identification, and care plan reassessment, with structured medical data extraction and source-linked recommendations.

AquaVision AI: Underwater Image Enhancement | *Next.js, Flask, PyTorch, GANs*

- Developed a GAN-based image enhancement pipeline using a ResUNet generator and PatchGAN discriminator with synthetic degradation augmentation and a multi-term perceptual loss.
- Deployed the trained model through a Flask inference API integrated with Next.js for real-time image upload and enhancement.

AI Mock Interview Platform | *Next.js, FastAPI, JWT, AI Agents, OpenRouter*

- Built an AI mock interview platform using Next.js and FastAPI with JWT authentication and modular agents for resume parsing, interview planning, question generation, and answer evaluation.
- Integrated OpenRouter LLMs with backend REST APIs to generate personalized interviews and structured candidate feedback through an agentic workflow.

Certifications

Neural Networks and Deep Learning – DeepLearning.AI: Neural networks and deep learning.
Machine Learning: Regression – University of Washington: Regression and predictive modeling.
Build Basic Generative Adversarial Networks (GANs) – DeepLearning.AI: GANs and generative modeling.

Achievements

Achieved a CodeChef rating of 1400+ in competitive programming contests.
Authored a dark mode implementation and proposed a standalone visualization mode with live DAG tracking for *Metaflow*, an open-source ML workflow tool, as part of a GSoC 2026 application.
